Star Finder

A **Star Finder** is a great web tool to locate your star online in style. It is convenient if you do not wish to install additional applications on your mobile phone. The views of Star Finder are spectacular when viewed from a larger screen. Use the registration number from your star certificate.

To open a Star Finder in your internet browser, use the following URL:

star-finder.starregistration.net

Download on the App Store

GET IT ON Google Play

Night Sky Star Finder

Our **mobile application** is the most popular and entertaining way to locate your star in the night sky. After entering your registration number, the app will read your location and time to provide you with a personalized sky view of your area. It will also help you point the mobile phone in the right direction towards your star.

With a Telescope

Suppose you wish to find your star with your telescope or at an observatory. In that case, you need to use the coordinates indicated on your Star Certificate. The coordinates are **RA and DEC** parameters. If seeking assistance from a professional in the observatory, you can also indicate your **HIP Number** from your star certificate.
